

EUNICE JACOB GIGI

Software Engineer | React • TypeScript • Node.js • NestJS

Nigeria | +234 808 457 2393 | eunice.gigij@gmail.com | GitHub | LinkedIn | Open to Global Opportunities

PROFESSIONAL SUMMARY

Software engineer with 4+ years building products across the stack. I am proficient in React and TypeScript on the frontend, and Node.js, NestJS, and Express on the backend, with PostgreSQL, MongoDB, and MySQL. I have built customer-facing dashboards, payment and wallet workflows, SaaS and health-tech features, and the APIs that connect those products to third-party providers. Comfortable owning a feature from the product conversation through the interface, the service, and the production issue that shows up later.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React, HTML, CSS, Tailwind CSS, component architecture, responsive layouts

Backend: Node.js, NestJS, Express.js, REST APIs, webhooks, background jobs

Databases: PostgreSQL, MongoDB, MySQL, Redis

Auth & integrations: JWT, role-based access, Paystack, Flutterwave, Mono, Prembly, Youverify, Smile Identity, Bitnob, Blink, IBEX, Mavapay

Engineering: Git/GitHub, GitHub Actions, CI/CD, Docker, Jest, unit and integration testing, technical documentation

Infrastructure: AWS, DigitalOcean, Google Cloud, Render, Vercel, Netlify, Heroku, Grafana, Datadog

PROFESSIONAL EXPERIENCE

Lead Backend Engineer | IPayBTC Technologies

Apr 2026 – Present

Bitcoin and Lightning payment infrastructure

- Lead engineering across wallet, payment, and integration services, including architecture, delivery, and engineering standards.
- Design and maintain APIs for wallet management, payment processing, and third-party providers.
- Investigate production issues across services, databases, infrastructure, and external integrations.
- Review code, keep technical documentation current, and work through transaction and reconciliation problems with the people who operate them.

Senior Backend Engineer | IPayBTC Technologies

Dec 2024 – Apr 2026

Bitcoin and Lightning payment infrastructure

- Built and maintained REST services for payment processing and transaction troubleshooting.
- Led integrations with Bitnob, IBEX, and Mavapay, including webhooks and transaction monitoring.
- Integrated Prembly, Smile Identity, and Youverify for identity verification and onboarding.

Fullstack Developer | Saleswave

Jul 2025 – Present

Contract, part-time

- Build creator and business workflows in React/TypeScript and NestJS, including search, filtering, aggregation, and role-specific behavior.
- Implement Paystack wallet and payment flows: verification, webhooks, reconciliation, and idempotent processing.
- Build reporting views and the APIs behind them for transactions, payments, and commitments.
- Debug issues across the interface, the API, and the database as one system.

Frontend/Fullstack Developer | eHealth Africa**Oct 2024 – Dec 2024***Contract · healthcare technology*

- Built FHIR-oriented REST APIs for healthcare workflows.
- Implemented JWT authentication and role-based access.
- Supported GitHub Actions workflows for deployment.

Backend Developer | Charisol (Maildrip)**Aug 2023 – Dec 2024***SaaS email marketing*

- Built campaign, subscription, and user-management workflows.
- Integrated Paystack and Flutterwave for subscription payments.
- Implemented organizations, invitations, and role-based access.
- Investigated production issues in those workflows and supported interns learning the codebase.

Fullstack Developer | Famasi Africa**Jun 2023 – Oct 2024***Digital health and pharmacy*

- Built React and Tailwind dashboards and customer-facing flows from product requirements and customer feedback.
- Worked with product and design on those flows, and traced customer-reported issues from the screen back to the cause.
- Integrated Paystack and Flutterwave across the interface and the payment APIs.
- Built synchronization between Zoho and MongoDB so admin tools and the application database stayed aligned.

SELECTED PROJECTS

Blinky — Lightning payment app built with React and NestJS: invoice interface, webhook confirmation, payment states, and polling.

github.com/eunicegijacob/Blinky-wallet-complete

Pactis — NestJS wallet API focused on transaction correctness, concurrency, idempotency, and failure recovery.

github.com/eunicegijacob/Pactis-wallet

Webhook Reliability Service — NestJS delivery service with retries, failure classification, inspectable attempt history, and replay.

github.com/eunicegijacob/Webhook-Reliability-Service

EDUCATION

Tech4Dev — Women Techsters Program**2023***Best Backend graduating student*

Continuous learning: distributed systems, API and system design, payment infrastructure.
